# Develop your original Game Boy concepts & ideas!

## GB Studio

Visual game builder with no programming knowledge required.

Design your graphics in any editor that can output PNG files e.g. Photoshop, Tiled, Aseprite.

Example project included to get started right away.

Make top down 2D JRPG style adventure games, platformers, point and click games and shoot 'em ups.

Build real GB Rom files which can be played in an emulator or on device using Flash Carts.

Build a HTML5 playable game that also works on mobile and can be deployed to any webserver or uploaded to Itch.io.

Built for macOS, Windows and Linux.

### Easy to Use

Drag and drop game creator with simple, no programming knowledge required, visual scripting. Multiple game genres supported.

### Write Music

Inbuilt editor makes writing music easy. With both piano roll and tracker modes.

### Build ROMs

Create real ROM files and play on any GB emulator. Export for web with great mobile controls, upload to Itch.io and share your game with the world.
