

ATARI DISCORD COMMUNITIES

OFFICIAL ATARI GAMES

The official Atari discord focuses on their games and intellectual properties. If you're playing Atari games on a console that doesn't bear the Fuji logo then this may be the discord for you. Xbox and Playstation users can show off leaderboards, report bugs for, or discuss all things Atari games here.

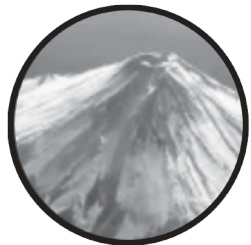

OFFICIAL ATARI VCS

This is the server for modern Atari console owners. Wishlist games, report bugs and Troubleshooting for the VCS 800, the 2600+ or 400 mini consoles here. Find online players or share your highscores. An updated ATARI VCS 800 bios can be downloaded from this server if your unit needs to be reflashed (some require this at initial start up).

ATARI CLUB

This Atari server focuses more on the blockchain side of things. The Atari Club and Atari-X have been getting branded together and is aiming to be a bit of a middle ground for older and younger Atarians. Interactive and even role playing elements may come into play, and the Atari Summer Camp is currently being hosted here.

FUJI ONLINE

Fuji online is an invite only server that is, possibly, the best way to find online players and orchestrate online gaming for the VCS 800. Being an active gamer in the Official Atari VCS server may be the only way to acquire an invite. Expect no moderation and no rules in Fuji as it hosts many handles Atari has given the official boot.

VCS 800 SYZYG HOUSE

A new public server for VCS 800 players. Allowing Pics, and GIFS, which the official Atari servers have eliminated, as well as allowing users to alert others with the @everyone command when organizing online games.

RETRO TECH REVIVAL

Companies like Analogue are making a lot of money by giving updates and facelifts to technology capable of playing cartridges and discs from past. Atari is doing this and more to some of their own legacy consoles.

The 2600+ is an updated Atari 2600 with an HDMI outlet and the ability to play 2600 and 7800 cartridges. Some carts are being reported not to work, however firmware updates are fixing many of these problems shortly after being discovered.

The 400 mini offers the experience of playing many of the Atari computer games of the 80's and has the ability to have more games and rom files uploaded. Featuring a usb version of the classic Atari joystick, other usb gaming controllers can be used as well, making the 400 mini an ultimate retro-rom machine.

On July 5th 2023 Atari announced a partnership with Playmaji, specifically with the intention to give their multi cartridge console, the Polymega, the ability to link the different cartridge ports to the Atari VCS 800.
